PROJECT PROPOSAL

Delgar Store Web Application Proposal (MVP Phase)
www.delgar.store

1. Project Overview
Delgar Store specializes in frozen food products and currently operates through traditional sales channels. This project aims to build a modern web presence that showcases products professionally while enabling internal inventory management through an admin dashboard.

This is an MVP (Minimum Viable Product) — the goal is to establish Delgar's online foundation without implementing online ordering or payment systems yet according to the owners.

The goal is to:
- Establish a credible digital presence
- Showcase frozen product catalog clearly
- Allow internal staff to manage products and stock
- Prepare the system architecture for future e-commerce expansion
- Improve brand visibility and professionalism

2. Target Users

Role	Purpose
Guest Visitor	Browse products and information
Admin (Staff)	Manage products and inventory

3. Core Features
- **Frontend Features**
  - Modern landing page
  - Product catalog display
  - Product detail pages
  - Category-based browsing
  - Search and filtering
  - Responsive design (mobile + desktop)
- **Backend Features**
  - Product CRUD (Create, Read, Update, Delete)
  - Inventory/stock tracking
  - Category management
  - Image uploads
  - REST API endpoints
- **Admin Dashboard**
  - Secure login
  - Add/edit/delete products
  - Update stock levels
  - Manage categories
  - Dashboard overview of inventory

4. Core Pages

Page	Description
Home	Brand intro, featured products
Products	Grid view of all items
Product Details	Description, storage info, price
Categories	Filtered product listings
About	Company info
Contact	Inquiry form
Admin Panel	Inventory management

5. Technology Stack

Layer	Technology
Frontend	Nuxt.js 3
Styling	Tailwind CSS
Backend API	Django (REST Framework)
Database	PostgreSQL / SQLite (MVP)
Media Storage	Django media storage

6. Project Timeline (Intern Scope: ~4 Weeks)

Phase	Description	Duration
Planning	Requirements & wireframes	3 days
UI Development	Frontend pages	1 week
Backend Development	API & database	1 week
Integration	Connect frontend & backend	4–5 days
Testing	Bug fixing & polishing	3–4 days
Deployment	Local or staging deployment	2 days

7. Deliverables (Intern Outputs)

- Fully functional product showcase website
- Admin dashboard with inventory management
- REST API backend
- Database schema
- Responsive UI
- GitHub repository
- Setup documentation (README)

8. Learning Outcomes for Interns

- Full-stack application workflow
- API development and consumption
- CRUD and database modeling
- Responsive UI development
- Admin dashboard architecture

9. Future Enhancements (Post-MVP)

Feature	Description
Online Ordering	Cart and checkout
Payment Gateway	GCash / cards
Customer Accounts	Order history
Order Tracking	Status updates
Notifications	Email confirmations
Analytics	Sales insights

Project Type

MVP Web Application, foundational build preparing Delgar Store for full e-commerce in future phases.
